ELECTRIC FLAT CAR

—— Electric flat car

Electric flat car, some called cross car, and some called ferry car, KP series electric flat car is a kind of linear rail (can also curve) transport vehicles. It has the advantages of simple structure, simple use, easy maintenance, large carrying capacity, and no pollution to the environment, and is widely used in machinery factories, warehouses and metallurgical factories as transport inside and outside the workshop or with cranes to move heavy objects over the span, such as: raw materials, casting and forging, riveting and welding machines, machining parts and finished products. KPJ type, KPD type and KPX type flat car produced by the factory are designed according to the principle of heavy crane, the box-shaped structure, two traffic body ground beam bearing, than the old flat car by four corner boxes for the bearing point, the strength is better, the safety factor is higher, the local carrying capacity is larger, easy to repair, maintenance and beautiful appearance. The new flat car can adopt Weizhong transmission, also can adopt dual drive, with a soft starting motor, so that the flat car runs more smoothly and braking is safer.

KPD series of electric flat car

KPD series of electric flat car is rail low-voltage powersupply electric flat car, not towing cable, the carwalk wayRail for the cable wire, a step-down transformer supply will be 380 volt power supply voltage to 36 volts (24 V) after, Send to walk co-per rail, and then by the conductive device on the vehicle will be sent to the rise of low voltage electrical transformer 36 volt power supply to 380 voltsAfter work, for motor. Low voltage power supply series of electric flatcar into two series, namely, single phase low voltagepower supply and three - phase low - voltage power supply two.

KPD series of electric flat car													
Single-phase power supply	KPD -6-2	KPD -10-2	KPD -6-1	KPD -10-1	KPD -16-1	KPD -25-1	KPD -40-1	KPD -63-1	KPD	KPD	KPD	KPD	
Three-phase power supply	KPD -5-2S	KPD -10-2S	KPD -6-1S	KPD -10-1S	KPD -16-1S	KPD -25-1S	KPD -40-1S	KPD -63-1S	-100-1S	-150-1S	-200-1S	-250-1S

According to user needs to design and manufacture kinds of non-standard products, the above parameters can be improved without notice

KPX battery electric vehicle

KPX series accumulator power supply rail flatcar, is provided by the battery power supply rail flat car, battery installation in the car's interior, power through the electrical control system, providing power to a DC traction motor: make the car start, stop, forward, backward, speed etc.. this series of flat to stype track and arc track, flammable and explosive, ferry occasions: flat car can be additionally arranged on hydraulic lift system: flat DC motor start smoothly, start the advantages of large t-orque, small impact on the speed reducer, low voltage, long service life: compared with KPJ, KPD series flat the car, with the security and flexibility: the running distance is not restricted, the track laying requirements are nothigh, the frequency of use is not high, suitablefor long distance transport-ation. But the battery need regular maintenance battery life as for about 2.5 years, and the use of the limited time.

KPX battery electric vehicle

KPX battery electric car, with no requirement for insulated rail, rail, low cost, simple operation, Interior minister can distance run, for the transport, the layout isvery convenient. (shape and size and low voltage electricCar is similar, height is slightly high)

name		KPX battery electric vehicle						
type		KPX-5-1	KPX-10-1	KPX-20-1	KPX-30-1	KPX-50-1	KPX-75-1	KPX-100-1
Line weight(t)		5	10	20	30	50	75	100

	Specification	212*140*335						
	Voltage	2V/只						
	Operating voltage	48伏					48伏	78伏
Be self-possessed(t)		3.9	4.3	5.2	6.5	8.3	11.4	14.5
Wheelbase		1435						
Minimum curve radius		30m				35m	55m	70m

According to user needs to design and manufacture kinds of non-standard products, the above parameters can be improved without notice

Turn trackless electric flat car

Design simple and compact structure, mature technology, reliable and large carrying safety factor, stable and reliable, to ensure smooth along the track structure under the action of external force Moving at a constant speed. Electric flat car whole USES the high quality steel, welding is complete, has enough stiffness and strength, the frame of the welding, heat treatment, Inspection and acceptance check in accordance with relevant standards. Relative motion of the mechanical parts reliable lubrication, wear resistance and stable operation. Electric flat car surface After sandblasting, coated with three high-strength anti-rust paint, paint two level, conform to the requirements of the environmental protection regulations, appearance of color can be selected according to customer's request. electric Flat car to have a complete safety protection measures and stop function, reasonable decorate the emergency stop button, to ensure that in the case of emergency and danger, can Convenient quickly to stop operation of personnel and equipment will not cause harm. Electric flat car has overload automatic protection and limit protection Complete de-vice, safety protection measures.

KPJ ries of electric flat car

KPJ series is the roll cable power supply rail flat car, storage will exchange 380V cable car up on line device cable car power supply, below the wire coiling device placed on the rail flat car, directly to the power supply through the exchange control system to control the motor start stop, forward and backward, etc.. operating system for low voltage 36V power control; flat car can be installed hydraulic lifting system: this series of flat car for harsh environment, high temperature environment, explosion-proof environment because the agency relatively simple, low cost, is the shop across the common rail flat-car; relative to the KPX series flat car, not affected by the restriction of time, relative to the KPD series flat car, for track laying requirements is not high, the car is applicable to arbitrary load, the use of high frequency applications: for running a distance of more than 50 meters need to increase the traverse to auxiliary winding. Maximum operation distance can meet 200 —eters.

Ladle ia a flat car

Ladle is a flat car for high temperature of ladle transportspecific. Due to the high temperature and safety, More wins. flat Falcon Feng material, the demand of the transmission system. Electrical Control Commission for all and common Rail flatcar breeding large area. In order to prevent spilling angry molten steel and slag, motor start and stop are slow, Slow speed, reduce inertia. In order to prevent the heat radiation of ladle. The inside of the vehicle without thermal insulation material In order to prevent the molten steel temperature impact damage to the motor. Dual motor, damaged another bench can continue normal function.

Rotary electric flat car

Rotary electric flat car is a kind of electric flat car can run on the 90° turn on the track. Principle: the electric flat car running to the electric turntable, Manual or automatic rotary electric rotary disc, the electric flat car along the perpendicular to the orbit docking with the vertical track, to achieve a 90 degree turn, apply to equipment life Circular or-bit, the production line cross track etc.. The system has stable operation, high precision orbit docking, can realize the automatic electrical control.

Vacuum furnace ferry electric flat car

Vacuum furnace ferry electric flat car is composed of the lower three layers of the body, the first layer of vehicle (the car) for long distance running car; car (car second layer laid on the middle) A rail, the ball screw drive and the vacuum furnace orbital docking; third layer (upper car) The car for rack and pinion drive with vacuum furnace car automatic docking the car pull vacuum furnace, in order to track second layer of vehicle track and vacuum furnace and docking smoothly without impulse. The strike force, safe and reliable operation of the variable frequency device.

Electric car ferry

The electric car ferry is composed of an upper and lower car body. The lower car body is used for ferrying. It is generally designed to be below the ground and the upper plane is at the ground level. The lower car body is equipped with rails on the table to connect different tracks to facilitate the two. The layer car transports the items to different tracks that are parallel to each other.

U type electric flat car

The U type electric flat car is a specially designed fixing device for transporting cylindrical workpieces that are easy to roll and scatter on the flat car table. The U frame is removable to facilitate the transportation of other workpieces.

Paint room electric flat car

The paint room electric flat car in the paint room runs to the paint room, and then the two cars are separated, and the tractor (power supply vehicle) drives out of the paint room to avoid the impact of high temperature on motors and electrical appliances.

The abrasive blasting transfer cart

The abrasive blasting cart adopts a dust-proof design to avoid the impact of sand and dust on the transmission system. The frame is mainly made of welded steel. The gaps in the vehicle body are to facilitate the sand to leak directly from the vehicle body during the sandblasting process, making it easier to sand blast

Hydraulic lifting electric flat car

The hydraulic lifting electric flat car can move freely without being limited by distance without the need for external power. It is easy to operate and can lift freely. The two cars can lift the workpiece at the same time or independently. The hydraulic lifting electric flat car can The raised height can be designed according to the dimensions provided by the customer

The hydraulic rail transfer cart

Loading capacity: 4 tons
 Power supply mode: battery
 Countertop size (mm): 3000*1000
 Table height (mm): 600
 Gauge: 750
 Operation method: handle operation + wireless remote control

Rail transfer cart with small gauge and large table

Loading capacity: 50 tons
 Power supply method: drag cable
 Countertop size (mm): 2500*4500
 Height (mm): 700
 Gauge (mm): 1160
 Operation mode: handle operation

Cable reel electric flat car KPJ-200T

Loading capacity: 200 tons
 Power supply method: cable reel
